

Deployment Standard Operating Procedure

Document owner: Platform Engineering Team. Last updated: January 2026.

1. Overview: This document describes the standard deployment procedure for all production services, including Project X.
2. Deployment Procedure: The deployment procedure for Project X requires running the staging pipeline, passing QA sign-off, then triggering the production release via the CI/CD dashboard.
3. Rollback: If a deployment causes errors in production, the on-call engineer must trigger an automatic rollback via the CI/CD dashboard within 15 minutes of the alert.
4. Change Windows: Production deployments are only permitted on weekdays between 10:00 AM and 4:00 PM local time, excluding public holidays.
